TILE ROOFING AT ITS BEST

There's nothing like the classic beauty of a tile roof. And when it's a Polyset® tile roof, there are added benefits.

Enhanced Walkability

In a Polyset® roof, the individual tiles are installed over a paddy of polyurethane foam. This paddy acts as a cushion and provides added support underneath the tile, enhancing its load bearing characteristics. When it's time to hang holiday lights, add a satellite dish or service your AC equipment, your Polyset® roof's ready.

Secure Attachment

The foam paddy conforms to any surface irregularities on the tile and roof substrate, yielding an excellent bond.

Insulation

The polyurethane foam paddy has excellent insulating capabilities. A Polyset® roof will minimize the amount of heat transferred from the roof to the attic space beneath - resulting in energy savings.

No Penetrations

With an optional adhesive backed underlayment, penetrations can be virtually eliminated. Since the tiles are adhered rather than nailed or screwed, there are no penetrations through the underlayment or substrate; the weatherproofing remains intact and uncompromised.

Durability

Because a Polyset® roof is only installed by Qualified Applicators, you know you're not only getting the beauty of tile, you're also getting a roof that will endure and continue to perform for years to come.
