

POLYSET®

American Ingenuity

RTFA1000EZ

Polyfoam, the pioneers of foam adhesive for tile roofing, are proud to introduce our latest generation of foam application equipment: The EZ. This system really lives up to its name! The EZ is our most advanced and user-friendly foam applicator yet. New and innovative design features make it even more reliable and cost effective. The EZ is a major breakthrough when it comes to price - the EZ is no stripped-down economy model. Check out these features:

EZ to use: 40% lighter

EZ to maintain: field-proven 'Airless' design has fewer parts

EZ to integrate: can be used with existing equipment and systems

EZ on the bottom line: priced very reasonably, the EZ will pay for itself in savings over the cost of our competitor's throwaway foam adhesive containers. In fact, the savings in comparison are so large, the EZ will *more* than pay for itself after the first 80 squares when using 17 gallon refillable cylinders!

Now the field-proven benefits of the Polyset® system can be realized by all tile roofing contractors at a price that is 'oh so EZ'!

Two EZ guns can be ganged together, working off the same chemical cylinder set for even greater cost, time and labor savings.

The EZ Advantage
