Tite-Set® Tech Bulletin

RE: Reuse of Propack 100 gun/hose assembly

The 25 ft gun/hose assembly (PP-104) for dispensing Tite-Set® insulation adhesive is designed for use on multiple Propacks by transferring the gun/hose assembly from an empty Propack to a new, full Propack. This procedure can be viewed on the Tite-Set® Propack Use and Care DVD. The procedure can also be seen by watching the Tite-Set® Propack Use and Care video on our website: www.polyfoam.cc

The gun/hose assembly can be used to dispense a maximum of four (4) Tite-Set® Propack 100s. If the number of units to be dispensed exceeds the maximum reuse requirement of 4 Propacks, additional gun/hose assemblies will be required.
